SCULPTRA

Sculptra is an injectable dermal filler that is used for volume restoration as well as to correct shallow-to-deep facial wrinkles and folds that appear with aging. Sculptra is made from poly-L-lactic acid, which helps to replace lost collagen. The material is a biocompatible, biodegradable synthetic molecule that has been safely used by physicians for decades. The medication is injected below the skin, above the fat, to treat folds and wrinkles, correct facial asymmetry, add volume to thin cheeks and midface, and to reduce hollowness of the temples. Sculptra is FDA approved for both cosmetic use (Sculptra Aesthetic) and to treat HIV-associated lipodystrophy.

Sculptra is a facial injectable that gives you subtle results over time, giving you natural-looking restoration, without giving you away. For optimal results, an average of three to four injection sessions over a few months is usually needed, with results that often last more than two years.

7

SCULPTRA ASSISTANCE PROGRAM

One Vial	\$500
-----------------	-------

Note: patients with HIV associated lipodystrophy can apply for enrollment in the Sculptra Assistance Program which provides the medication free of charge if certain financial need eligibility requirements are met.

INJECTABLE CHIN/NECK CONTOURING

KYBELLA

KYBELLA (deoxycholic acid) injection is the first and only FDA-approved injectable treatment that is used in adults to improve the appearance and profile of moderate to severe fat below the chin (submental fat), also called, “double chin.” The active ingredient in KYBELLA is deoxycholic acid, a naturally-occurring molecule in the body that aids in the breakdown and absorption of dietary fat. When injected into the fat beneath the chin, KYBELLA causes the destruction of fat cells. Once destroyed, those cells cannot store or accumulate fat.

You and your doctor will customize your KYBELLA treatment regimen, including how many treatments you need, based on your desired chin profile. Most patients achieve their desired results **following 2 to 3 treatment sessions, spaced 6 weeks apart**. During these sessions, your physician will administer KYBELLA into the fat under your chin using multiple injections. After the desired aesthetic response is achieved, retreatment with KYBELLA is **not** expected as results are permanent.

One Vial

\$750

Estimated Cost of Each Session

\$1500

Most treatment sessions require 2 Vials

INJECTABLE CHIN/NECK CONTOURING

QWO is the first and only FDA-approved injectable for moderate to severe cellulite in the buttocks. The protocol involves injecting QWO directly into targeted dimples in the buttocks and thighs. The enzymes in QWO, called collagenases, target the structural causes of cellulite in 3 ways: by releasing fibrous bands, redistributing fat cells, and stimulating the growth of new collagen. Injections are relatively painless and take as little as 10 minutes each session.

A series of three treatments, spaced 21 days apart, has been shown to significantly and permanently decrease mild, moderate, and even severe dimpling with minimal discomfort, no surgery, no lasers, and no downtime.

Single Treatment Session

\$1500

Package of 3 Treatment Sessions

\$4000

CLEAR AND
BRILLIANT

CLEAR + BRILLIANT

Clear + Brilliant is the latest fractional laser technology designed to refresh your skin, improve its luminosity, smoothness and tone while preventing and treating the signs of aging. The laser creates millions of microscopic treatment zones in your skin, replacing damaged skin with healthy, younger looking tissue. This treatment is designed to be effective but minimize the downtime that accompanies other laser procedures. You may experience some redness and inflammation that may last up to 24 hours. The treatment takes about 30 minutes and we recommend 3-4 treatments space 2-4 weeks apart followed by a maintenance treatment every 6-12 months. You will see both immediate results a few days after the treatment as well as progressive results that can last for months. This is the perfect treatment for men and women of all ages who want to both correct and prevent the early signs of aging and maintain the look of their skin.

CLEAR AND
BRILLIANT – PERMEA

CLEAR + BRILLIANT – PERMEA

15

The Clear + Brilliant – Permea is optimized to provide not only improved skin texture, but has a special focus on skin tone and pigmentation. Whether the discoloration is from old acne marks, from sun damage, or even the hard-to-treat melasma, the unique wavelength, energy, and depth of penetration of Clear + Brilliant – Permea makes it an ideal treatment for anyone wanting a more even skin tone, but without significant post-procedure peeling or downtime.

The special Permea handpiece is optimized to deliver brighter more even skin tone and enhanced skin permeability. The Permea technique involves combining the Clear and Brilliant Permea laser treatment (with a precise depth that targets epidermal pigmentation) with a topical antioxidant regimen, such as the SkinCeuticals CE Ferrulic antioxidant serum. The synergy between the two treatments allows for precise targeting of unwanted pigmentation in the skin and takes advantages of increased skin permeability to achieve maximum patient benefits.

You may experience some redness and inflammation after the treatment that may last up to 24 hours. The treatment takes about 30 minutes and we recommend 3-4 treatments spaced 2-4 weeks apart followed by a maintenance treatment every 6-12 months.

HALO

HALO

Halo is the world's first and only Hybrid Fractional Laser that delivers a non-ablative and an ablative wavelength to the same microscopic treatment zone. Combining these two wavelengths creates a strong synergistic effect, resulting in ablative results with non-ablative downtime. Halo provides unique benefits including:

- Ability to powerfully treat wrinkles, pores, scars, and pigmentary issues
- Less painful than traditional fractional resurfacing
- Significant clinical results in just 1-2 treatments
- Faster healing time

The unique dual wavelength delivers an unprecedented ability to customize treatments for each individual. Every patient has different needs in terms of sun damage and their ability to tolerate downtime. With Halo, both the ablative and non-ablative wavelengths can be adjusted and dialed in precisely to deliver exact treatments patients needs for amazing results within the desired downtime. Halo provides an unmatched patient experience in the world of laser resurfacing. The combination of low downtime, great results, and tolerable treatment makes for extremely happy patients.

MORPHEUS8

MORPHEUS8

Morpheus8 is an advanced fractional RF skin tightening and subdermal adipose remodeling device (SARD) that is used to remodel and contour the skin of the face and body. Penetrating deep into the skin and fat, this device can target all layers of the skin to resurface, tighten the skin, improve laxity, and reduce fat for firmer, smoother, more contoured skin. Morpheus8 is safe for all skin tones and can be performed on all facial and body parts, including eyelids. The depth of Morpheus8 treatments are fully adjustable, with the ability to penetrate deeper into the skin than any other microneedling or fractional radiofrequency device, going as deep as 7mm. Patient comfort is a major advantage of this device because of the sharper tips and tiny punctures it causes in the skin without tugging or pulling. M8 can be used to, treating wrinkles, laxity, jowls, acne, acne scars, stretch marks, surgical scars and much more.

MICRONEEDLING

MICRONEEDLING

Microneedling is a minimally invasive technique that increases the production of collagen and elastin in the skin to maintain a youthful appearance. The Rejuvapen microneedling handpiece creates thousands of areas of micro injury in the surface layers of the skin. By precisely controlling the depth, spacing, frequency, and pattern of these needle pricks, the Rejuvapen can be directed to stimulate collagen production in areas where it is needed the most – commonly in the skin around the eyes and lines around the mouth. This collagen induction therapy procedure can help to reduce fine lines, pore size, and discoloration, and can even diminish the appearance of scars and stretch marks.

Microneedling can be combined with a liquid treatment layered on the skin’s surface – such as a growth factor serum or your body’s own Platelet-Rich Plasma (PRP) – to further improve skin quality, evenness, and texture. Downtime is minimal with the face remaining red for approximately 24-48 hours. Improvements in the skin are seen within the first few days with benefits that continue to improve weeks after the treatment. Microneedling can be repeated as frequently as every 6 weeks, or as infrequently as 2-3 times a year, depending on one’s specific concerns.

Single Session	15 min	\$400
Double Session	30 min	\$700
Triple Session	45 min	\$1000
Microneedling + Recovery Serum (layered growth factors)	Per Session	\$100 (additional)

*Your physician will guide you as to the type of appointment you should book based on the surface area you are treating. As a general guide – individual localized areas such as the eyes, the lips, and isolated scars and stretch marks can be treated in a single session, whereas a double session may be required for treatment of the full face or broader areas of stretch marks on the body. A triple session may be needed for someone looking to treat the face, neck, and chest, all in one session.

PLATELET-RICH PLASMA (PRP) INJECTIONS

PLATELET-RICH PLASMA (PRP)

Platelets are components of the blood responsible for healing and tissue regeneration. When PRP is injected or needled into the skin, it acts as a matrix that promotes your own collagen growth – regenerating tissue to naturally soften wrinkles, tighten skin and even the skin’s tone. The PRP Protocol starts with drawing a sample of your blood, which is spun down using a specialized PURESPIN double filtration technique to separate the different components and extract the platelet-rich plasma, or PRP. This material, rich in growth factors, is then injected and/or microneedled into the skin to achieve its rejuvenating effect.

PRP injections can improve skin’s overall texture, tone, brightness and laxity, diminish lines around the mouth, cheeks and eyes, as well as reduce the appearance of pores. PRP therapy has also been shown to improve dark circles and reduce puffiness under the eyes and has been used effectively to treat uneven pigmentation and melasma. PRP is also used as a treatment for hairloss (see next section). The treatment’s popularity stems from its efficacy, safety and its organic nature – results are derived from utilizing your blood’s own repair machinery and growth factors instead of chemical compounds. Results begin to show 3-4 weeks after the treatment session and continue to improve with time. Three sessions are generally recommended, spaced 1-2 months apart, to achieve an optimal outcome. PRP therapy can be combined with microneedling treatments, Fractora RF, laser procedures, as well as injectable fillers and Botox.

A triple session may be needed for someone looking to treat the face, neck, and chest, all in one session.

NON-SURGICAL HAIR RESTORATION

Tribeca Park Dermatology offers 3 non-surgical hair restoration treatment modalities – these can be performed individually or combined for a more comprehensive approach.

HAIR RESTORATION

PLATELET-RICH PLASMA (PRP)

Platelet-Rich Plasma (PRP) injections utilize vital components of your own blood to help halt and reverse the miniaturization of hairs seen in male and female patterned hair loss. The PRP Protocol starts with drawing a sample of your blood, which is spun down using a specialized PURESPIN double filtration technique to separate the different components and extract the platelet-rich plasma, or PRP. This material, rich in growth factors, is then injected and/or microneedled into the scalp and/or eyebrows for optimal hair regrowth and hair loss prevention. PRP serves as a stand-alone treatment for hair loss or as a complement to hair restoration procedures. We advise 3 treatments, each spaced 1-2 months apart with maintenance sessions 1-2 times yearly based on clinical progress.

MICRONEEDLING

Microneedling is a non-surgical therapeutic treatment that increases blood flow to the scalp and/or eyebrows and allows for absorption of layered PRP or topically applied hair regrowth sera. The combination of PRP and microneedling yields more robust hair growth results than either treatment alone.

OMNILUX RED LED THERAPY

Red Light LED Therapy is increasingly utilized both in-office and at home as a treatment for male and female patterned hair loss. As a standalone treatment, a series of 8 weekly sessions is advised with once monthly sessions suggested for maintenance of results. LED therapy can also be combined with PRP and Microneedling treatment to boost results.

PRP Injections	\$1000
PRP Injections + Microneedling	\$1400
Microneedling Alone	\$400
Microneedling + Layered AQ Advanced Hair Complex	\$500
LED Therapy Session	\$60
LED Therapy Package of 8	\$400

*For an additional \$500, the PRP protocol can be repeated during a single visit to harvest twice the volume of PRP and treat multiple areas in a single visit.

FRACTORA

FRACTORA

Fractora RF is an innovative non-surgical device used to improve the texture of the skin and reduce the skin's laxity. The device delivers radiofrequency energy through small micro-pins to heat the dermal and sub-dermal tissue, promoting collagen restructuring and resulting in more youthful, smooth and elastic skin. Treatment parameters can be modulated to deliver results based on desired degree of correction, ranging from improvements in fine surface texture and dyspigmentation to deeper correction of more intense signs of photo-aging – laxity, lines, deep wrinkles, scars, acne scarring, and stretch marks. Treatments can be performed on all areas of the face including the upper and lower eyelids and stubborn lip lines, as well as the neck, chest, abdomen, and areas of concern on the extremities. Fractora RF can be performed safely on all skin types and ethnicities. Depending on the intensity of your Fractora RF treatment(s), a series of 1-4 sessions may be advised, each spaced 1 month apart. The recovery period is brief, usually with only 1-3 days of redness and mild swelling. Visible results are seen at two weeks with improvements continuing up to three months after treatment. Fractora RF may be combined with Platelet-Rich Plasma (PRP) injections + layering for even greater improvements in complexion, texture, and radiance.

VANQUISH

VANQUISH

Vanquish is the award-winning non-contact radiofrequency body contouring system that selectively heats and destroys adipose (fat) tissue, while sparing surrounding tissues like skin and muscle. Vanquish is “non-contact” because the applicator sits just above the body’s surface during the entire treatment session – no contact is made with the skin. The efficacy and safety of the procedure is based on the fact that the electrical impedance of various tissue layers differ. The Vanquish Radiofrequency Device automatically tunes its frequency to match and target its thermal energy into the impedance range of fat tissue. The temperature in the treated fat increases to apoptic levels while the surrounding tissues remain protected. The end result is selective destruction of fat and visible reduction in inches around the waist, thighs, and/or arms over the weeks that follow.

Vanquish treatments are safe, easy, and pain free. During Vanquish treatments, there is a sensation of warmth similar to contact with a heating pad. Normal activities may be resumed immediately after completing each session. 5 Treatment sessions are recommended for the abdomen, back and/or love handles and 6 sessions are recommended to treat the arms or thighs. Treatments should be performed once or twice weekly for optimal results. Results vary but most patients can expect an average reduction of 1-3 inches around the waist and abdomen and 1-2 inches around each thigh. Hydration can affect the results so it is advised that patients drink several glasses of water prior to their sessions.

PELLEVÉ

PELLEVÉ

Pellevé is a revolutionary new system designed to firm the skin and reduce the appearance of lines and wrinkles. Pellevé delivers gradual radiofrequency energy deeply into the skin, causing heat to slowly build. The increasing heat modifies the collagen bundles deep in the skin, causing contraction and stimulating the growth of new collagen over time. The result: firmer, tighter, younger looking skin. Pellevé can safely be used to treat the delicate skin of the upper and lower eyelids as well as the skin on the face, neck, and hands. Unlike other skin tightening systems, the treatment is comfortable and no anesthesia or skin cooling is needed. There is no visible redness or recovery-time needed after the procedure, so you can return to home or work immediately following the treatment. Over time, Pellevé continues to work, improving the skin's texture and tone. The wrinkle reduction and skin firming effects of Pellevé continue to improve for at least six months as your skin produces new collagen. Though benefit can be seen following a single session, for optimal results, three sessions of Pellevé are recommended, spaced every 2-4 weeks, then repeated once annually as a single session for maintenance.

INTENSE PULSED LIGHT LASER TREATMENTS (IPL/BBL)

INTENSE PULSE LIGHT (IPL/BBL) LASER TREATMENT

33

Tribeca Park Dermatology offers the most advanced and widest variety of IPL (Intense Pulsed Light) technology. We utilize 2 devices: the InMode Lumecca IPL and the Sciton BBL (BroadBand Light). Both systems deliver effective treatments for hyperpigmentation, sun-damage, rosacea, vascular lesions, and loss of firmness. Positive changes are seen after the first session but for full results we recommend a series of 3-5 treatments, spaced every 4 weeks. Depending on the condition, more treatments may be necessary. Many people maintain their results with an additional maintenance treatment every 6-12 months.

SKINTYTE

SCITON ST SKIN TIGHTENING

35

The ST system from Sciton is the latest advancement in skin tightening – more effective than Thermage and Titan with less discomfort and no downtime. Sciton ST Broad Band Light uses safe infrared light energy and advanced skin cooling technology to comfortably deliver heat below the skin’s surface to the dermis for increased tissue tightening and reduced skin laxity. The most popular areas to treat are the jaw-line and the abdomen. Positive changes are seen after the first session but for full results we recommend a series of 4 treatments, spaced every 4 weeks.

FOREVER YOUNG BBL

FOREVER YOUNG BBL (BBL + SKINTYTE)

While the ability of BBL to improve photo-aged skin is now well known and universally accepted. Keeping skin healthy and delaying the signs of skin aging are newly described benefits of regular combination BBL/SkinTyte treatments. Forever Young BBL combines layered treatment with multiple passes of BBL energy for deep dermal heating and collagen stimulation, utilizing different filters to target red and brown structures in the skin, and finishing with infra-red energy for skin tightening. In addition to being an excellent treatment for existing sun damage, it can also be preventative, what we call “Prejuvenation” for keeping young skin looking young.

A groundbreaking study out of Stanford University has shown that Sciton’s Forever Young BBL/SkinTyte treatments not only correct skin damage, but can also delay the signs of aging. Subjects who received treatments at regular intervals (every 4-6 months) demonstrated a functional change in their gene expression pattern—shifting it from an aged pattern of expression to patterns seen in young skin, resulting in collagen regrowth, tightening of the skin, decreased laxity and a more youthful and rejuvenated appearance. After 10 years in the study, most subjects’ skin was graded a full 10 years younger than their actual age, as though there had been no passage of time during the decade long-study.

The below recommendations outline a maintenance program to substantially delay the signs of aging and maintain your skin’s youth.

Ages 20-30	1 Forever Young BBL treatment per year
Ages 30-40	2 Forever Young BBL treatments per year
Ages 40-50	3 Forever Young BBL treatments per year
Ages 50 & UP	4 Forever Young BBL treatments per year

RESURFACING LASERS

MICROLASER PEEL

39

The MicroLaser Peel is the latest in skin rejuvenation. The Sciton Countour TRL laser utilizes a short-pulsed Erbium laser to ablate the outer layers of the skin at precise depths. We offer these "peels" from 10-50 microns. This is an excellent treatment for deep wrinkles, photodamage, scars, actinic keratoses, and poor skin tone and texture. The laser can be used to safely resurface the skin above the lip and around the eyes. The depth of penetration is carefully controlled with micron precision. The treatment stimulates the growth of new collagen and elastin which improves the thickness and resilience of the skin and helps to give the skin an overall younger, rejuvenated appearance. You will experience 2-5 days of redness and peeling with this procedure. Depending on your skin and the depth of the peel, we may recommend anywhere from 1-3 treatments.

MicroLaser Skin Peel — Whole Face	10 microns (Arctic Peel)	\$600
	20-30 microns	\$800
	35-50 microns	\$1000
MicroLaser Peel — Neck and Chest	10 microns (Arctic Peel)	\$600
	20-30 microns	\$800
Microlaser Peel — Face + Neck + Chest	10 microns (Arctic Peel)	\$900
	20-30 microns	\$1200
	35-50 microns	\$1400

TRL Full facial resurfacing + under-eye deeper resurfacing (>100 microns) \$2500

TRL Full facial resurfacing + deep lip resurfacing (>100 microns) \$2500

RESURFACING LASERS

PROFRACTIONAL THERAPY

ProFractional Therapy is an advanced treatment for wrinkles, acne scars, and uneven skin tone that dramatically improves the overall appearance of the skin with less downtime than traditional resurfacing laser procedures. The procedure uses an Erbium laser to treat thousands of pinpoint areas in the skin. Because only a fraction of the skin is directly treated, the surrounding untreated skin promotes rapid healing. The skin's wound healing response creates new collagen which adds firmness and resilience to the skin.

PROFRACTIONAL THERAPY

ProFractional Tx + MicroLaser Peel + Deep dermal eyelid and lip resurfacing	\$3500

LASER HAIR REMOVAL

LASER HAIR REMOVAL

43

The principle behind laser hair removal is the use of long wavelength energy to target melanin within hairs in the deeper layers of the skin, disrupting the follicles' ability to regenerate and permanently reducing hair growth with each session. Common sites for unwanted hair removal include the face, neck, underarms, back, legs, arms, bikini and full Brazilian treatment areas.

At Tribeca Park Dermatology, we utilize three laser/light systems for permanent hair reduction – the InMode Diolaze laser, the Sciton Profile 1064 Nd:YAG and the Sciton Forever Bare BBL System. With 3 devices to choose from, we can offer the most effective treatments available for each individual based on their skin and hair type, and we can safely perform treatments on all skin tones. Hair reduction is seen after the first session but for full results a series of 5-8 treatments is usually needed, spaced 4-6 weeks apart.

FOREVER CLEAR BBL – LASER THERAPY FOR ACNE

FOREVER CLEAR BBL – LASER THERAPY FOR ACNE

45

For those who have tried numerous methods to get acne under control, including oral and topical medications and are still not seeing the progress they are seeking, there are a number of elective treatments for acne offered at Tribeca Park Dermatology that may be considered. These include the use of chemical peels, photodynamic therapy, alternating Omnilux Red/Blue LED therapy and Forever Clear BBL.

Forever Clear BBL is a cutting-edge acne treatment that uses the power of light to comfortably and effectively clear acne without creams or medicine. BBL is the world's most powerful IPL (Intense Pulsed Light) device delivering light energy deep into your skin to stimulate and regenerate your skin cells, leaving you with clear, healthy, radiant skin.

- Step 1:** Skin is first treated with **BLUE** BBL light to eliminate acne-causing bacteria at its source, deep down in the pores.
- Step 2:** Skin is then treated with **YELLOW** BBL light to reduce the inflammation and acne-associated redness to give you healthy, luminous skin.
- Step 3:** For added benefit, the skin is then treated with SkinTyte II™ using **INFRA-RED** light in rapid, gentle pulses to initiate the body's natural healing process.

Effective for both adults and teens, Forever Clear BBL can address acne on most any part of the body, including common treatments sites such as the face, neck, chest and back. Significant clearing is usually apparent after 3-6 weekly sessions, with maintenance treatments planned according to clinical progress, every 1-3 months.

TREATMENT COST PER SESSION

Face and/or Neck	Full Back	\$400
\$300	Full Back + Chest	\$500
Chest	Face + Neck + Chest + Shoulders/Upper Back	\$500
\$300	Face + Neck + Chest + Full Back	

PHOTO-REJUVENATION LED THERAPY

PHOTO-REJUVENATION

47

The Omnilux Revive LED device effectively and painlessly rejuvenates the skin by safely emitting a focal wavelength of red light that penetrates deep into the skin to activate cellular machinery and increase collagen and elastin production. Omnilux Revive is completely safe and pain free.

Omnilux Blue can be used to treat active inflammatory acne. Combination treatments with blue and red LED lights simultaneously kills bacteria, diminishes sebum production, and reduces inflammation in the skin. Studies have demonstrated an 81% clearance of inflammatory lesions 12 weeks post therapy.

Omnilux Blue or Revive	Single Session	\$60
Omnilux Revive	Package of 8	\$400
Omnilux Blue/Revive (for acne)	Package of 8	\$400

Photodynamic therapy is a treatment that combines the application of a photosensitizing agent with exposure to either the Omnilux Blue or Omnilux Revive to more aggressively treat both acne and/or photoaging. A topical solution (Levulan) is applied to the skin prior to exposure to the light source — results for both acne and photoaging are excellent. Photosensitivity persists for 48 hours after this treatment and there is a period of recovery or “downtime” following this procedure.

Omnilux + Levulan	Single Session	\$800

CHEMICAL PEELS

CHEMICAL PEELS

Chemical peels are beneficial in the treatment of wrinkles, skin discoloration and age spots, as well as dull skin texture and mild acne scars. The procedure involves the application of a chemical solution to remove outer layers of aged, discolored and irregular skin. Fresh skin is then generated, which is usually smoother, less wrinkled and more even in color.

49

Glycolic Peels (30%, 50%, 70%)	\$250
Beta Peel (30% Salicylic Acid)	\$250
Pyruvic Acid Peel (50%)	\$250
V.I. Peel (Vitamin C, Retinoic Acid, TCA, Salicylic Acid)	\$400
V.I. Peel Purify (Retinoic, Salicylic and Kojic Acids, Benzoyl Peroxide, TCA)	\$400
V.I. Peel Boosters	+ \$100 extra

LEG VEIN TREATMENTS

LEG VEIN TREATMENTS

51

SCLEROTHERAPY

Sclerotherapy is a technique used to treat unwanted leg veins. Solutions of either Asclera (sotradechol), glycerine or concentrated saline are used to irritate injected vessels to cause them to collapse. The treatment is safe and effective, usually requiring 2-3 treatments at 6-8 week intervals for clearing.

1 Vial of Asclera

\$500

SCITON CLEARSCAN LASER

The Sciton ClearScan laser (ND:YAG) is another effective way to treat leg veins. This laser uses infrared energy to precisely treat visible spider veins and other vascular lesions.

Sciton Joule 1064 Laser
